

The Hope Survey is a unique tool that enables schools and communities of any size and nature to assess the hopefulness of their environment, encouraging the growth of hope individually and collectively.

Why Grow Hope?

High-hope students, staff, and communities are **30%** more likely to be **equitably successful**.

The ability to grow and sustain hope delivers a significant increase in school and workplace **productivity**.

Hope builds resilience, removes unfounded fears, and makes **safe** space for **creativity** and **innovation**.

Welcome to the
HOPE SURVEY®

What you'll measure...

Individual perceptions of **autonomy**, **belongingness**, **goal orientation** (pathway thinking), **efficacy**, **individual hope**, and **engagement** serve as the pillars of your day-to-day activities.

The Hope Survey provides a research-based, data-driven, cross-cultural, behavioral method of assessing and growing your school's likelihood for sustained success, achievement and resilience.

When contrasted with the impact of historical performance outcomes and grade-point-averages (GPAs), **hope wins every time**. The research is clear that as hopeful humans, you are better at engaging in self-directed learning and finding the greatest fulfillment in your academic and professional lives.

A Hope Practice®

Building a practice of hope meets your students and staff where they're at, without an expectation of prior knowledge.

Our universal approach engages participants in personalized experiences, allowing for a wide range of activities to take hold and grow over time. This shortens the time to proficiency, real-life application of learning, and more frequent thresholds of achievement.
